

The graphic features the letters 'API' in a large, bold, red font. Surrounding the text are various red icons: a gear, a cloud, a database cylinder, a code editor icon with '</>' symbols, a speech bubble, and a document with lines. The background is a dark red with a circuit-like pattern of lines and dots.

API

The way to ...

- enhance your VoIP projects
- simplify integrations
- unlock new business

* Application Programming Interface

Availability / Redundancy / Security

Agenda for today

What is an API and why do we build APIs?

Our API Strategy and Use Cases

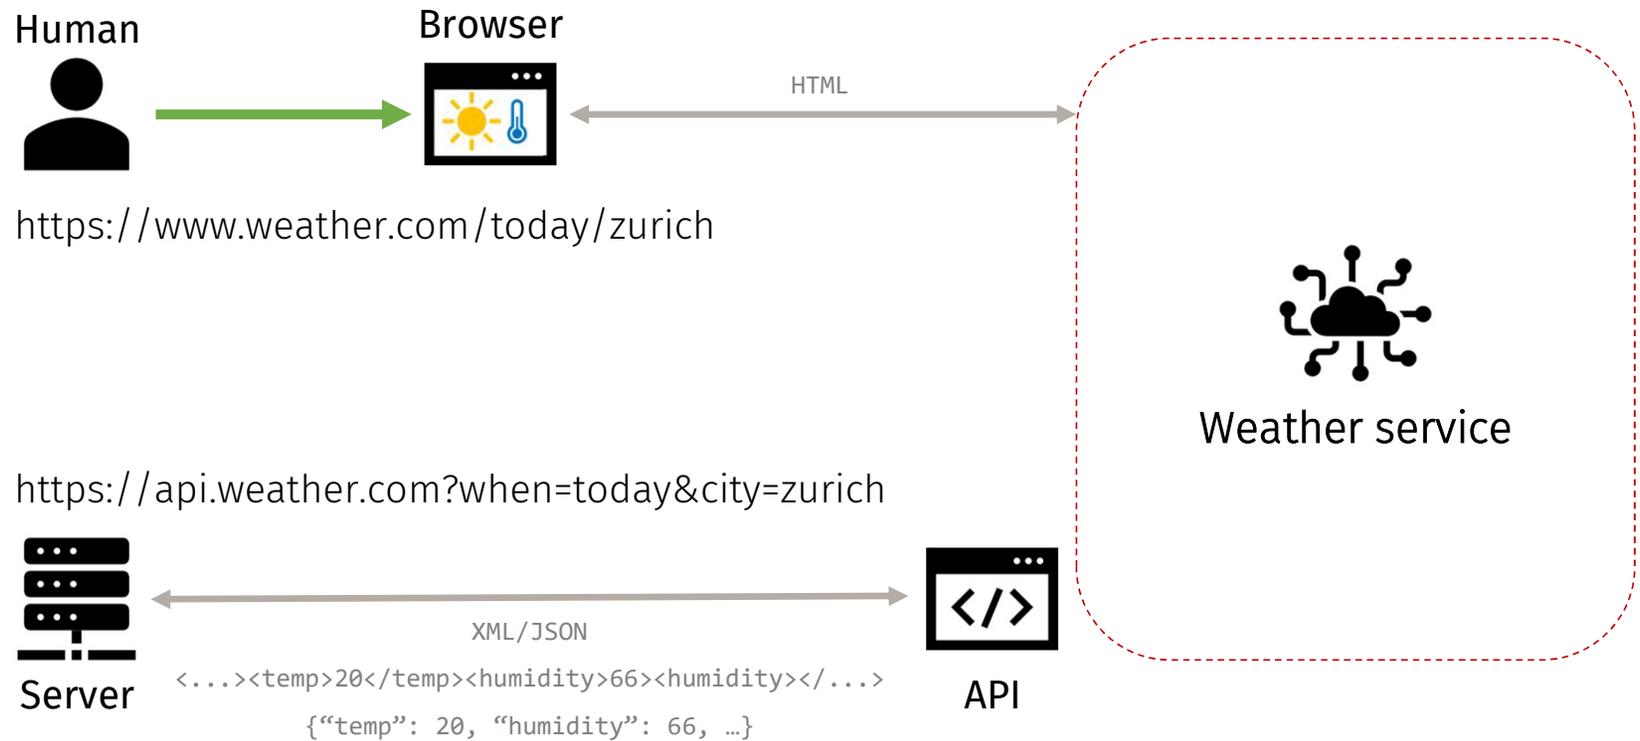

Pricing Strategy

Contact, EXPERT TALK, and Q&A

What's an API ?

Why do we build APIs ?

Make **accessible** our solutions to custom integrations

Automate **business workflows** around voice and messaging

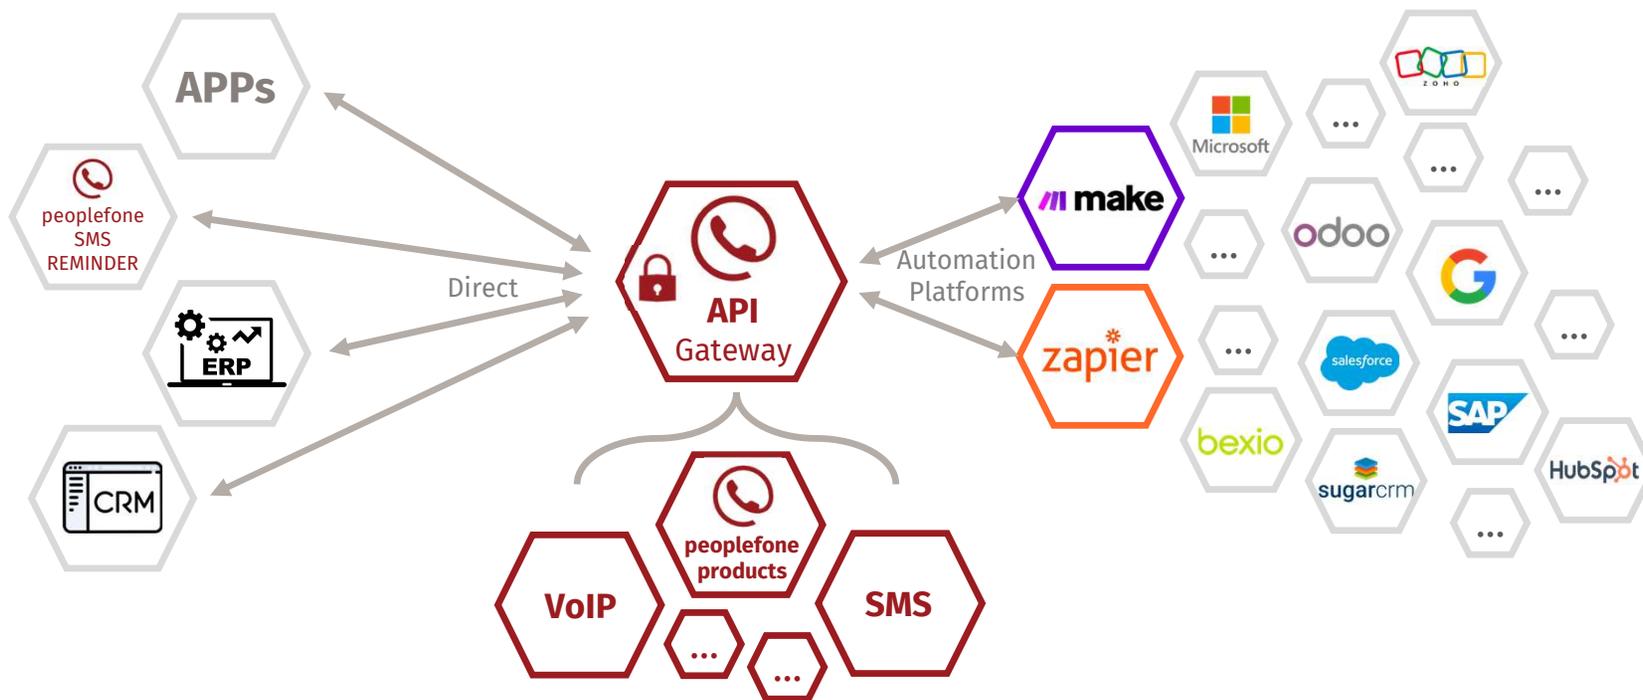

Integrate **Artificial Intelligence** features

Our API Strategy

Needs custom development

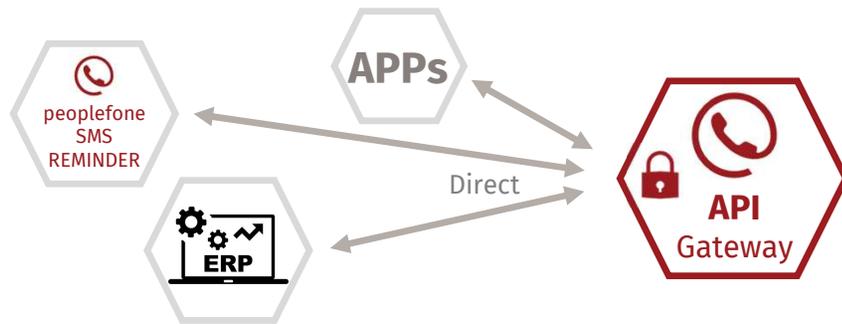

Needs only configuration
no-code

Our API Strategy

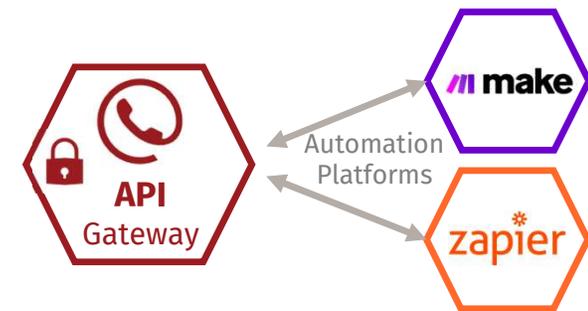

Direct Connection

Requirements

- A **defined workflow**
- Access to **our API documentation** (Swagger)
- Own **programming skills** in applications with APIs
- Full responsibility for **building and maintaining** the entire flow within your application

Automation Platform

- A **defined workflow**
- An **API-ready application**
- An automation platform **account with usage skills**
- An **APP module** on the automation platform (optional but recommended)

Automation Platform Interface

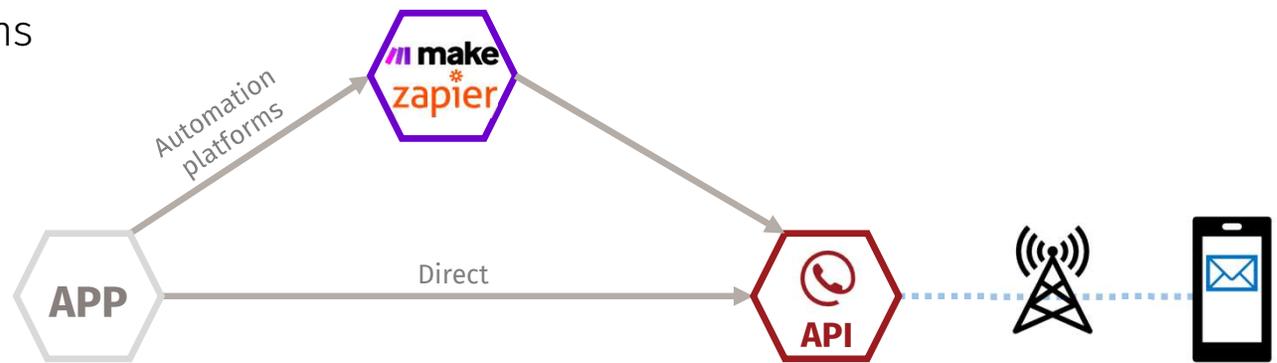

Screenshot make.com

- **Visual Workflow Builder** : Drag and drop, Click and connect, no code
- **Prebuilt APP Modules** : Connect to several apps and services without custom development
- **Real-Time Monitoring** : Track execution and intuitive troubleshooting

Send a SMS by example:

- Reservation confirmations and reminders
- Payment reminders and order status updates
- Bulk messages for marketing campaigns
- Two-factor authentication (2FA)
- System alerts and notifications

External Routing

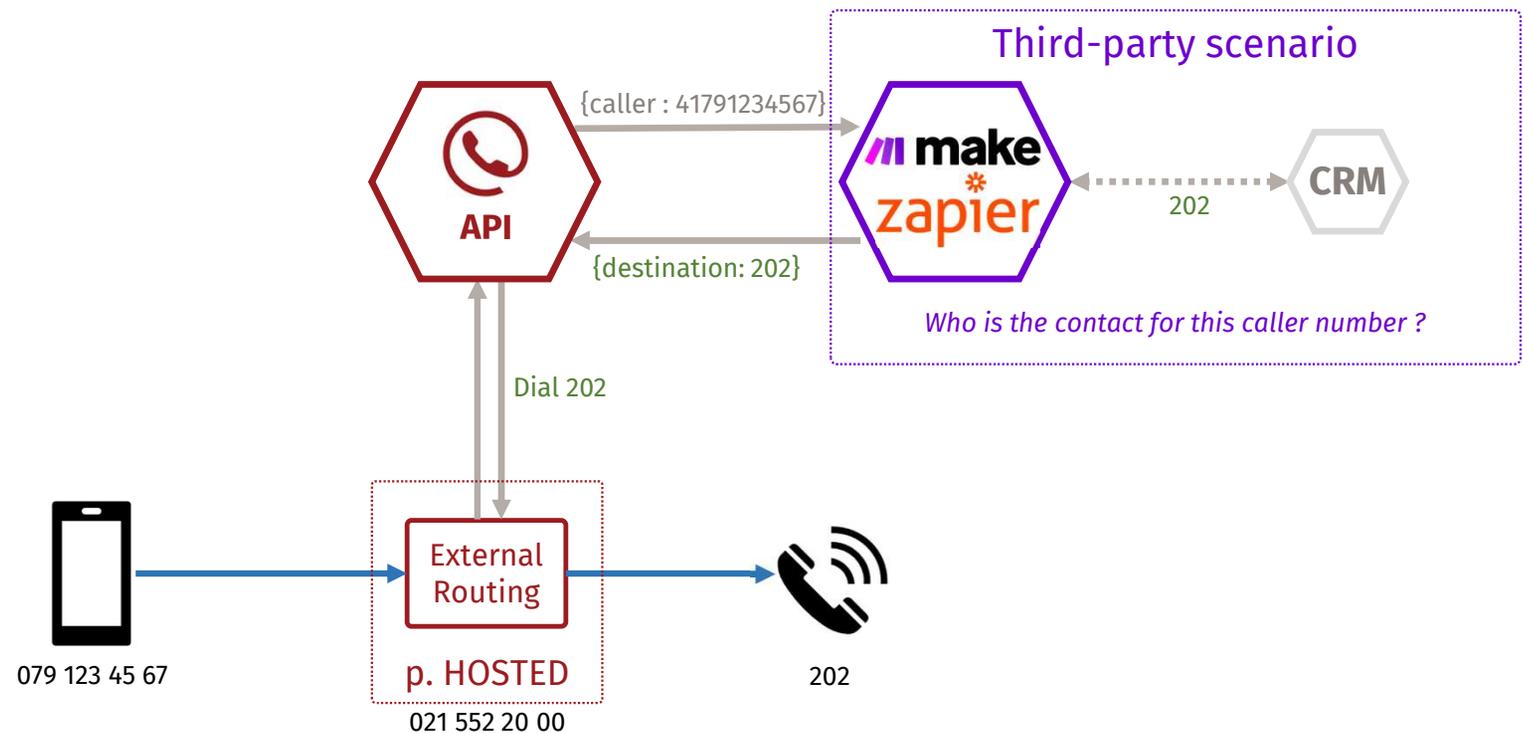

One function ↔ Infinite scenarios

Let's look at 3 use cases

Route the call to a specific resource

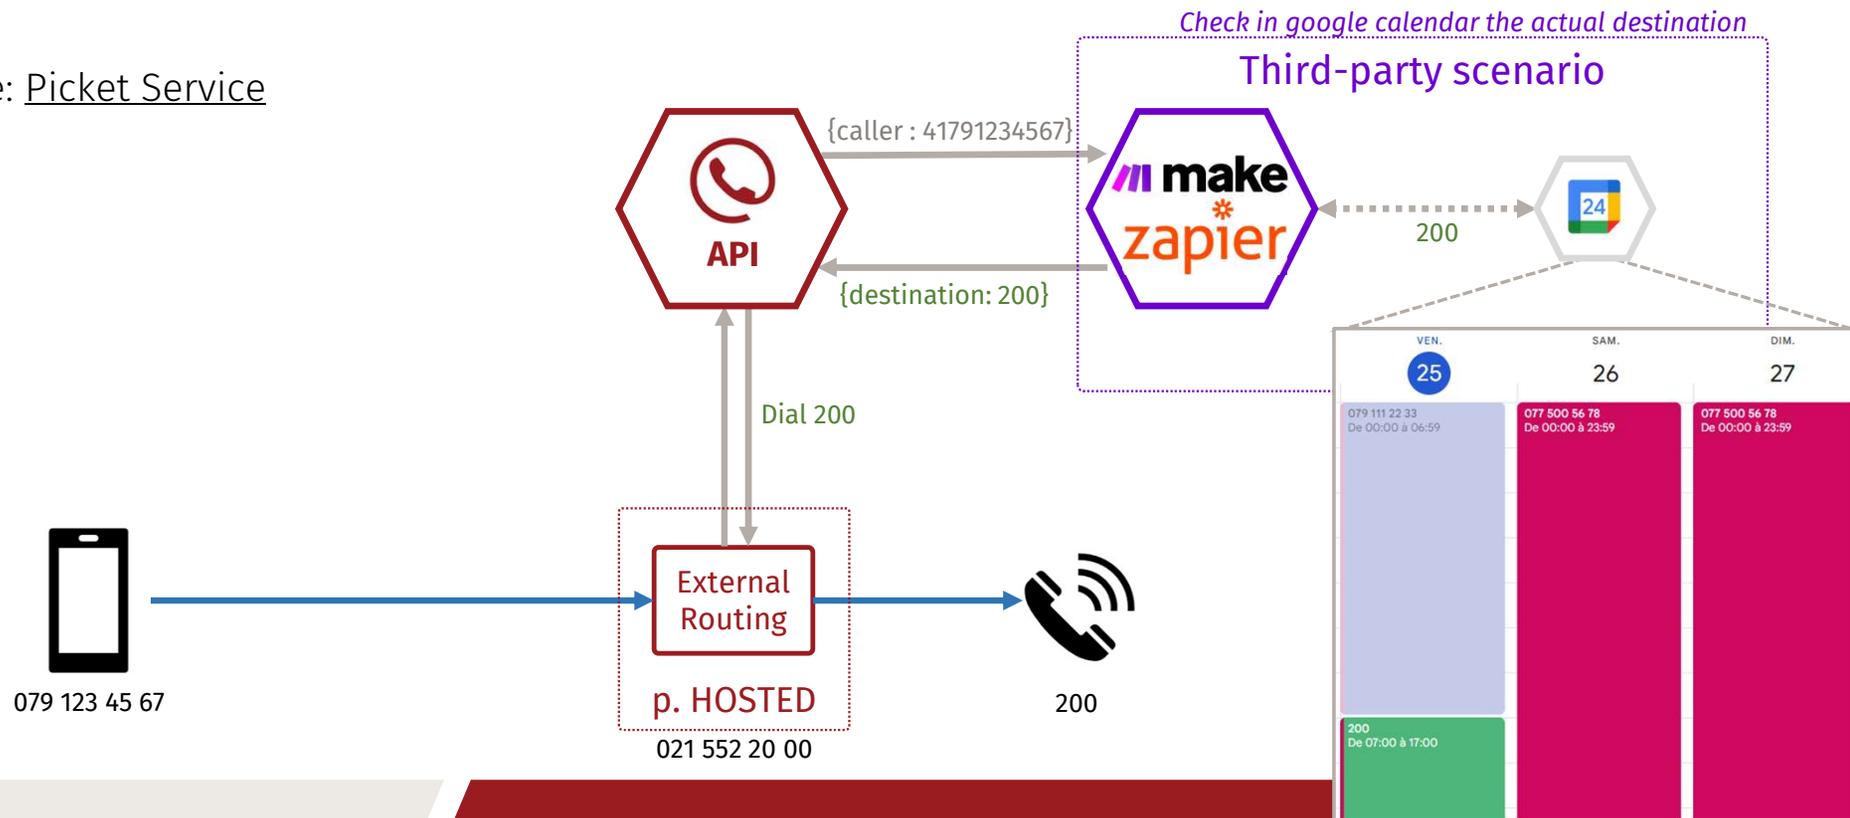

Example: Service Desk

- By priority,
- By language,
- By assignment

Route the call depending on a calendar

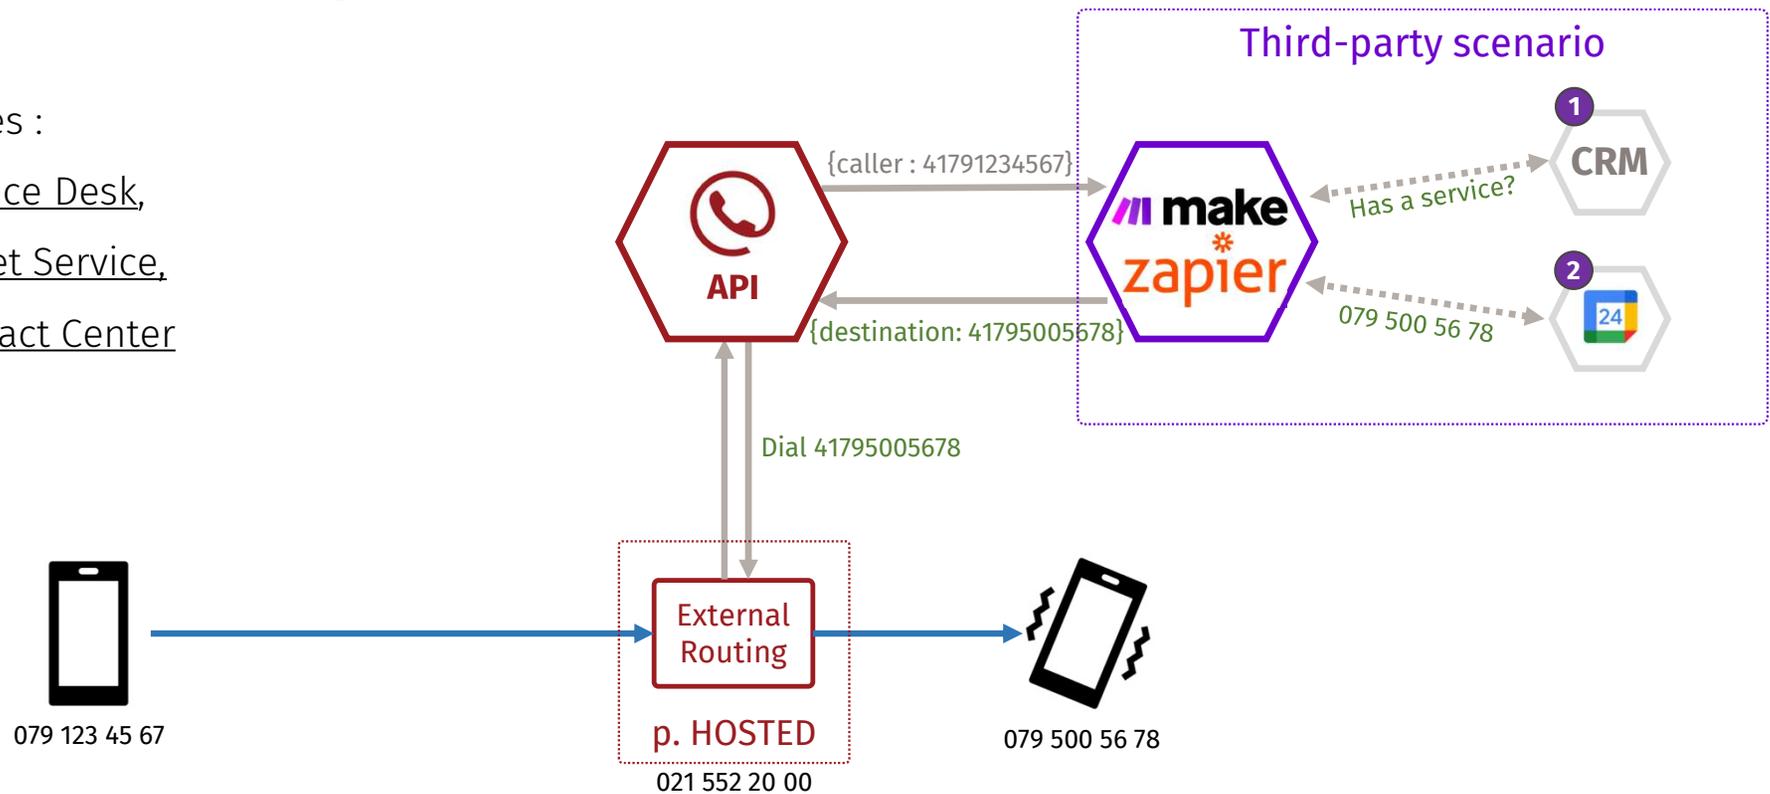

Example: Picket Service

Route the call depending a smart scenario

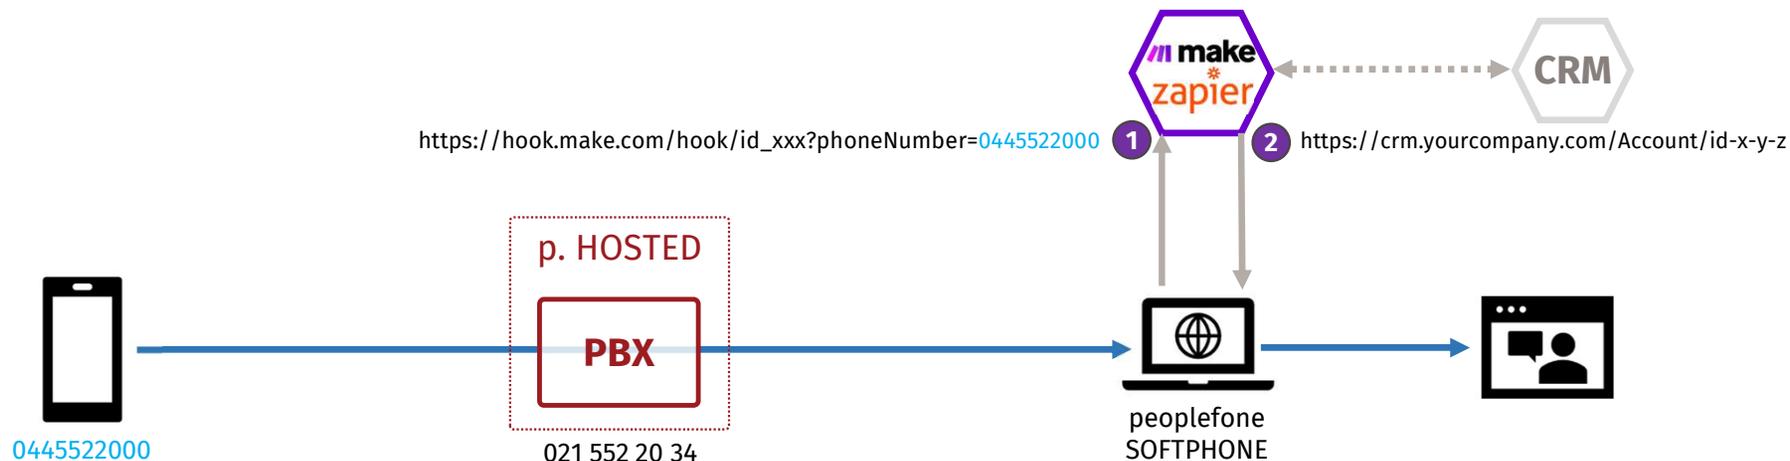

Examples :

- Service Desk,
- Picket Service,
- Contact Center
